(54) Title: WAVEGUIDE FREQUENCY-BAND/POLARIZATION SPLITTER

(57) Abstract: The invention proposes an optimized solution of frequency/polarization splifter that requires no adjustment after production and can be produced entirely by moulding. The polarized-wave splitter comprises various components, including a polarization splitter 1 coupled to two filters 3 and 5 via transition regions 2 and 4. The overall dimensions of the various components are such that the transfer characteristics of the splitter are better than the characteristics resulting from the sum of the characteristics of the components constituting the splitter.
